

## **Celotex:**

### **Vragen Zembla, 26 april 2021:**

In 2015 Celotex commissioned Exova to do a study into the application RS5000 in various facade build-ups. Exova produced [a report](#) relating this, which is dated 26th May 2015.

It has become clear that Celotex did not share with Exova the full details of a test done with RS5000 in 2014, such as the inclusion of magnesium oxide boards on the test rig. A former Exova employee with whom we spoke says he, because of this, feels 'a little bit cheated' by Celotex.

Question: Why was information about the build-up of the test rig of the May 2014 test omitted from the report that was shared with Exova?

### **Antwoorden Celotex, 29 april 2021:**

*As part of Phase 2, the Grenfell Tower Inquiry is considering a large number of complex and inter-related issues in connection with the fire, including the design, testing and installation of a multi-component rainscreen cladding system, of which insulation manufactured by Celotex, formed one element.*

*We are committed to assisting the Inquiry with its work and re-affirm our deepest sympathies to everyone who has been and continues to be affected by the Grenfell Tower fire.*
